SUMMARY

I have been a developer since 2018. I spent the first six years of my career in software engineering—backend development using Python (FastAPI, Django, Flask) and Go, integrations via REST and SOAP, and web products for the agribusiness, healthcare, and research sectors. In 2024, I transitioned to data engineering, and since 2026, I have been balancing data engineering and AI engineering.

SKILLS

Core competencies: python . bigquery . airflow . dbt . dlthub . google-adk . vertex ai . langchain . rag . fastapi . docker

EXPERIENCE

Scheffer

Mar 2024 – Present

Mid-level BI Analyst

Cuiabá, MT

Designed and maintained Oracle → BigQuery pipelines—orchestrated via Apache Airflow—that made over 1TB of corporate data available for analysis.

Developed a CDC (Change Data Capture) service using Oracle LogMiner to capture production changes and persist them as Parquet files in Cloud Storage, making them queryable in BigQuery.

Led the migration of pipelines from Meltano to dltHub, gaining observability and reducing production troubleshooting time.

Standardized the team's dbt projects using reusable templates and formatting rules, reducing development time for new models.

Built production-grade conversational agents using the Google ADK on Vertex AI Agent Engine for agronomic analysis integrated with business data.

Developed the company's internal chatbot (Next.js, AI SDK, BigQuery, Cloud Storage) featuring corporate authentication and conversation persistence.

Implemented an MCP server for Qlik Cloud, connecting LLMs (Gemini/Vertex AI) to the company's analytical dashboards.

Built Python APIs (FastAPI) for executive dashboards and "extraction-as-a-service" capabilities, as well as a RAG API for querying internal documents.

Instituto Atlântico

Nov 2022 – May 2023

Junior Systems Analyst – Step 12 (Software Developer)

Fortaleza, CE

Developed features for 3D printers with the HP team, using Go for the backend and React for the frontend, handling everything from technical design to production delivery.

Worked in an Agile environment (Scrum/Jira), delivering predictable results per sprint.

Magrathea Labs (acquired by Trusted)

Oct 2021 – Sep 2022

Software Engineering L 4.1 (Software Developer)

Joinville, SC

Developed and maintained critical livestock management systems using Django and Go, serving agribusiness clients with high availability requirements.

Participated in migrating from BigQuery to proprietary APIs, giving the product autonomy over its own data.

Following the acquisition, integrated healthcare software via REST APIs using Ruby on Rails.

Scheffer

Feb 2018 – Oct 2021

Junior Systems Analyst (Full-Stack Developer)

Cuiabá, MT

Developed integrations between the corporate ERP and external systems using REST and SOAP APIs in Python, eliminating manual data reconciliation.

Built mobile applications for agricultural production workflows, replacing paper-based processes with real-time data capture in the field.

Developed and maintained internal web products using Python (Django, Flask) and JavaScript (Vue.js, React).
